CAREER SUMMARY

Web developer with a Master of Engineering degree, and a background of more than 10 years of multi-country program and capital project management experience in IT retail automation and oil and gas. Experienced in building websites and native applications to improve business performance and solve client needs. Able to manage a product from scratch including requirement elicitation, development, project management, quality assurance, deployment, and release management. Excited to build performant and tailored products to contribute to the realization of the company's vision.

SKILLS

- **Front End development:** HTML, CSS, JavaScript, jQuery, Bootstrap library, React, Redux, TypeScript, Angular, Material
- **Back End development & databases:** Node.js, Express, API (JSON, RESTful), Postman, MongoDB, PostgreSQL, Firebase
- **Tools and technologies:** Jira, ServiceNow, Visual Studio Code, Git Hub, Trello, MS Projects
- **Release management:** waterfall and agile SDLC approach, continuous improvement, and continuous delivery (CI/CD), business analysis, requirements gathering, planning, and validation, release planning and deployment.
- **Portfolio, Program and Project management:** manage multi-country and complex technology programs and projects
- **Leadership skills:** lead and manage collocated and remote multidisciplinary teams
- **Interpersonal skills:** adaptability, teamwork, communication skills, negotiation, problem-solving
- **Quality assurance:** advanced skills developing controlling and implementing policies, standards, and procedures
- **Languages:** bilingual, fluent in French and in English

WEB DEVELOPMENT PROJECTS

MyPrime

Intensive project-based program with a focus on front popular end frameworks, RESTful API and databases

- Built a full stack web application (database, API, Front end) from architecture to end-to-end testing using MongoDB, Express, React, Nodejs, Boostrap, Heroku, Mongoose, Redux, Angular, Postman, Netlify and Heroku
- Created 2 front end interfaces (with React and Angular) to interact with the database and the API

MeetApp

Project-based program focused on serverless functions, progressive web applications and test-driven development

- Developed a progressive serverless application (progressive, cross platform, offline available using React) to display events from google calendar using AWS Lambda, Google calendar API, with visualization components (rechart) and token based Open Authorization (OAuth).
- Implemented test driven development approach to convert user stories to scenarios (Gherkin) for unit and integration testing (Jest) acceptance testing (Cucumber) and end-to-end testing (Puppeteer)
